Total vaccines committed: 68 747 050 **Total vaccines delivered: 18 100 630** **Percentage: 26.3%**

HJI Summary Sheet Vaccine Supplies and Gaps Number 1: 3 August 2021

* Deliveries for the remainder of August and September (Q3) will be reflected in Summary Sheet 2.

- I. Current live delivery schedules and vaccine contracts are not public.
- II. Fill and finish license Agreements for Aspen (J&J) and BIOVAC (Pfizer) are not public.
- III. The possible and mooted full manufacturing license for Aspen (J&J) is still being finalised and not public.
- IV. All information is based on sources that are publicly available and the Health Justice Initiative is not responsible for the results obtained from your use or reliance on this information.
- V. **The information is at times imperfect due to the lack of proper information sharing by relevant stakeholders. Please do notify us if we have inaccurately reflected any data.**

Notes:

1. The cumulative and daily number of vaccines administered in South Africa across public and non-public sites is available at: <https://sacoronavirus.co.za/>.
2. The SA President's Remarks and the Health Ministry Press Statements are available at: <https://sacoronavirus.co.za/> and <http://www.thepresidency.gov.za/press-statements/president-cyril-ramaphosa>.

3. The Bhekisisa and Media Hack Dashboard is available at: <https://mediahack.co.za/datastories/coronavirus/dashboard/>.
4. The population of South Africa is approximately 58 million. About 40 million people are over 18 years of age. **South Africa is aiming to vaccinate about 67% of the population. That is approximately 40 million people.**
5. There are numerous active public and non-public, as well as private, vaccine sites and as of 26 July 2021, public and private health sites, faith organisations, and pharmacies in South Africa are administering vaccines: <https://sacoronavirus.co.za/active-vaccination-sites/>:
 - The EVDS registration system will now allow walk-in registrations and vaccination, SMS, WhatsApp and telephonic (call centre) registrations, and self-scheduling 'appointments'.
 - As of 24 July 2021, South Africa is vaccinating anyone over 35 years of age including *documented* non-nationals living in South Africa – though undocumented people are currently excluded from the roll out. There are obstacles faced by non-nationals, poorer communities, non-insured, and elderly people without free transport, especially in several non-urban and hard to reach areas, even with mobile vaccine clinics and home vaccinations available in some parts of the country.
6. Adults living with a comorbidity are not yet specifically identified for registration, but all people over 35 years are now eligible for vaccination (from 15 July) and from September all over 18-year-olds.
